

Septic Tank Outlets Within the Secondary Road Right-Of-Way

In conjunction with current Hardin County Board of Health regulations concerning septic tank construction, Hardin County will not allow septic tanks outlets within the secondary road right-of-way. We will not permit any new septic tanks to be outletted in the road ditches. Each property owner must provide an adequate seepage bed for their septic systems. An existing outlet can remain in place as long as it's not causing a major problem. The Hardin County Maintenance Department will not clean a ditch or repair a crossroad tile that involves a septic tank outlet.
